The election filed December 13, 2002 has been entered and made of record as paper no. 7.

Applicant's election of claims 13-25 in Paper No. 7 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

The drawings are objected to because figures 2 and 3 are not labeled "PRIOR ART". See MPEP 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barna et al.

Barna discloses an apparatus for capturing images comprising a pixel of an imager (202), a column feedback circuit (208), and a soft resetting transistor (214). It would have been obvious that the apparatus can capture images under ultra low

illumination with high dynamic range. Note that the terms "ultra low" and "high" are simply relative terms.

The other references are cited to show other structures having pixels, feedback circuits, and resetting transistors pertinent to Applicants' disclosure.
